

Welcome, Ann

This short guide shows you how to review the proposed production system and tell us what should change. It takes about 10 minutes. There are no wrong answers — your input shapes the final build.

1. Signing in

Open **www.nineonetwo.online/bodyworks** and sign in with the username and password you were given. You can sign in from a phone or computer, as many times as you like.

2. What you'll see

- A **progress bar** at the top shows how many questions you've answered ("3 of 11 reviewed") and a **Jump to next** button that takes you to the next unanswered one.
- The system is laid out as **steps** (the workflow), the **bus & truck sections**, and a few **key decisions**.

3. Answering each part

- For each step, tap **Looks right** if you're happy with it, or **Needs a change** if something is off.
- If you pick *Needs a change*, type what should be different in the box below — short notes are fine.
- Changed your mind? Tap the **Reset** button to clear that answer.
- A green **Answered** tag appears once a question is done.

4. Correcting the bus & truck sections

- These are the stages a vehicle passes through. **Rename** them to match your real workshop, tick **QC gate** where a quality check must be passed, and **Add** or remove rows as needed.
- If the order is wrong, just mention it in the notes.

5. Saving — nothing gets lost

- Press **Save my changes** at the bottom when you're done (or part-way — you can come back anytime).
- Your typing is also kept on your device automatically, so a closed tab won't lose your work.
- You can return later, edit anything, and save again.

6. Keeping a copy

- **Download PDF** — saves your answers and opens a printable copy (choose "Save as PDF").
- **Email me a copy** — sends your answers to an email address you enter.

Tip: You don't have to finish in one go. Answer what you can, press Save, and continue later — the progress bar remembers where you left off.
